João Paulo Oliveira

Backend Developer · Java | Spring Boot | AWS

Blumenau, SC, Brazil · jpauloo.2003@gmail.com · linkedin.com/in/joaooliveira07 · github.com/JoaoOliveira07 · portfolio

SUMMARY

Backend Engineer with 3+ years of experience building scalable systems and complex integrations with Java, Spring Boot and AWS. Hands-on with event-driven architecture, legacy ERP integration, multi-tenant B2B platforms and Infrastructure as Code with Terraform. Entered tech in 2023 without a formal technical background and grew from IT Assistant to Mid-Level Developer in just over two years. Actively involved in architecture decisions, with a focus on maintainable code, performance and production reliability.

PROFESSIONAL EXPERIENCE

Segala's Alimentos Aug 2023 – Present

Career progression: IT Assistant → Trainee → Junior → Mid-Level Software Developer

Mid-Level Software Developer Sep 2025 – Present

- Build robust, scalable backend solutions for the B2B e-commerce ecosystem, with a focus on quality and performance.
- Contribute to technical and architecture decisions (DDD, hexagonal architecture, event-driven design with SQS/SNS and Kinesis).
- Manage AWS infrastructure as code with Terraform across test, staging and production, with CI/CD on GitHub Actions.

Junior Software Developer Aug 2024 – Aug 2025

- Delivered complex features autonomously, including ERP integrations and the mobile app backend.
- Optimized database queries and performance-critical parts of the application.

Trainee Software Developer Mar 2024 – Jul 2024

- Took an active part in development tasks, strengthening software engineering fundamentals.

IT Assistant Aug 2023 – Feb 2024

- Started in IT, focused on technical learning and software development fundamentals.

SELECTED PROJECTS

B2B E-commerce Backend

Core backend of the B2B ecosystem: a partner-level multi-tenant REST API (Layered + DDD) serving the onboarding app, the admin panel, the web store and the field sales app, with event streaming via Kinesis.

Java 17, Spring Boot 3, PostgreSQL, Redis, AWS SQS/SNS/S3, Kinesis

ERP ↔ Cloud Integration — Client / Middleware / Orchestrator

Three Java services that keep products, customers, prices, inventory, orders and notifications in sync between an on-premise Oracle ERP and the B2B platform, using a central SQS bus and orchestrating credit, PIX and order-release workflows.

Java 17/21, Spring Boot 2.7/3.2, Oracle, PostgreSQL, AWS SQS

Sync API for the Offline App

Hexagonal-architecture API that generates sync jobs, runs read-only queries against the partner's database and feeds the offline-first app's local database through S3.

Java 17, Spring Boot 3.5, PostgreSQL, Redis, AWS S3, ECS Fargate, Terraform

AWS Infrastructure as Code
Multi-environment provisioning with reusable modules, remote state on S3 and a CI/CD pipeline.
Terraform, AWS Lambda, API Gateway, RDS, S3, VPC, SSM, ECR, GitHub Actions

Ecosystem Apps and Dashboards (full-stack)
Contributed to an offline-first Flutter field sales app, an onboarding app with Brazilian document validation (CPF/CNPJ), a white-label B2B SPA in React and a Next.js admin panel with an AI chat (AWS Bedrock / OpenRouter).
Flutter, Dart, BLoC, Drift, React 18, Next.js 16, TypeScript, AWS Bedrock

Side projects
JOPES.EXE (a portfolio as an isometric RPG), CommitClock (automatic timesheets from a photo of a paper time card, with Groq Vision plus the GitHub and Clockify APIs) and the Kira Semi Joias store (Next.js, checkout via WhatsApp).
JavaScript, three.js, TypeScript, Next.js, Groq AI, Vercel

TECHNICAL SKILLS

Backend & APIs	Java 17/21, Spring Boot, Spring Integration, JPA/Hibernate, REST APIs, Node.js (Lambda)
Architecture	Event-Driven Architecture, microservices, DDD, hexagonal/clean architecture, multi-tenancy, ERP integration
Cloud & IaC	AWS (ECS Fargate, RDS, SQS, SNS, S3, Lambda, API Gateway, Kinesis), Terraform, Docker, GitHub Actions
Data & Observability	PostgreSQL, Oracle, Redis, Prometheus, Grafana, Datadog, Sentry, CloudWatch
Mobile & Frontend	Flutter, Dart, BLoC/Cubit, React, Next.js, TypeScript, Vite, Tailwind CSS

RECOMMENDATIONS

LinkedIn recommendations from Alessandro Elias (Tech Lead | Senior Software Engineer), Kauan Curbani (Senior Developer), Fernando Junior (Senior Software Engineer), Joao Vargas and Felipe Baer, highlighting a key role in building the mobile app's Java/Spring backend, autonomy on ERP integrations, query optimization, fast learning and maturity in technical discussions.
